CGPA - 7

PROJECT

Machine Learning Based Model for Power Generation Through Power Plant in Various Regions of India

M. Sc. Dissertation

It focuses on developing a predictive model to optimize power generation. By leveraging historical data, weather patterns, and machine learning algorithms, the model aims to enhance efficiency and reduce operational costs. The study provides valuable insights into the factors influencing power generation and offers a data-driven solution for stable and reliable electricity supply across diverse regions in India.

Designed a software for mobile shop in C# language

B. Sc. Dissertation

This innovative solution aims to streamline various aspects of mobile shop operations, including inventory management, sales tracking, customer information, and invoicing. By employing C# programming, the software offers an intuitive user interface and robust functionalities, enabling mobile shop owners to enhance efficiency, optimize business processes, and provide a seamless shopping experience to their customers.
