Hard Skill

- Manual Testing
- Agile
- Jira
- Software Development Life Cycle
- Software Testing Life Cycle
- Testing Tools Loadrunner, Jmeter, Postman.
- Programming Languages #C, java
- protocols Web(HTTP/HTML), SAP GUI.

Soft Skill

- Communication
- Attention to detail
- Problem-solving
- Multi-tasking
- Critical thinking
- Time management
- Team player with a positive attitude

Education Background

- **Sri Venkateswara University**

  Bachelor's degree in Business/Commerce, General

  Completed in 2022

Licenses & certifications

- **Programming Hero**

  C Programming

  Completed in 2024

- **Microsoft**

  Create effective prompts for generative AI training tools

  Completed in 2024

About Me

I am familiar with all phases of the Software Development Life Cycle and Software Test Life Cycle. I can understand, analyze, and streamline test requirements. I have good knowledge of JIRA, LOADRUNNER, POSTMAN, and JMETER. I am also familiar with different levels of testing such as Unit Testing, Integration Testing, System Testing, and Acceptance Testing. I am well-versed in test documentation such as Test Scenarios, Test Cases, Test Data, Defect Reports, and Test Metrics. I know Bug Reporting & Tracking Processes and Bug Reporting and Tracking using Bug tracking tools like JiraTool and Issue Tracker. I also know SQL to conduct Database Testing.

PROJECTS

Project Name: OpenCart Application Project_01
        Role: Performance Tester
        Tools: Load Runner

Description: The project will involve the development of a web-based application using OpenCart, an open-source e-commerce platform. The application will include user registration and login features, product catalog, shopping cart, checkout, payment gateway integration, and order management. The project will aim to provide a seamless user experience and ensure the security of sensitive customer information. The target audience for this e-commerce platform will be customers looking to purchase a wide variety of products online.
Roles and Responsibilities:
•understanding & Explore the Functionality.
• Writing test scenarios.
•writing Test cases & Build deployment.
•Test Execution.
•Bug Reporting & Tracking.
•Sanity Testing,Re-Testing & Regression Testing.
• Gathering Non-Functional Requirements.
• Creating and executing Load Tests and performance Tests and providing adequate supporting information for bottleneck analysis.
• Closely worked on designing the Test Plan.
• Performance test script recordings, Executions in Loadrunner.
• Preparing Vuser Scripts based on Business Process with Web (HTTP/HTML) protocol.
• Enhancing Vuser scripts using Correlation Parameterization and Checkpoints.
• On the Execution time closely monitor all the servers like web server, app server, and DB server.
• Executed performance scripts and identify the bottlenecks in the application.
• Prepare the final test report which includes client-side and server-side metrics.
• Preparation of Test Summary Report.
•Test sign-off.
