Tittle: UiPath Developer (RPA)

OBJECTIVE:

Overall, 3+ years of IT Experience with 2+ years of experience on Robotic Process Automation (UiPath) seeking to have a position for RPA Developer.

PROFESSIONAL SUMMARY:

- Good exposure to RPA Environment and Its Life Cycle.

- Experience in UiPath RPA tool, Orchestrator, Robotic Enterprise Framework.

- Build and development of a given business operational process automation ensuring it adhere to required development standards, framework and **best practices**

- Experience in drafting SDD (Solution Design Document) and Runbook.

- Experience in working with Assets, Queues, Jobs and Triggers in Orchestrator..

- Good Experience in Debugging, Exception Handling, Handling Try-catch activities.

- Participated in end-to-end development for automated business processes on the requirement, moving the Designed Process to UAT machine and importing them to the repository manager.

- Good understanding of business processes & requirements along with technical details.

- Design and implement a business operational process automation, ensuring compliance with necessary development standards, frameworks, and best practices.

- Proficient in leveraging various components of UiPath for developing and implementing Robotic Process Automation (RPA) solutions.

EXPERIENCE DETAILS:
Working as **Senior Developer** in **Techmahindra,** Hyderabad from **October 2020** and Date to till date

EDUCATIONAL QUALIFICATIONS:

- Completed Bachelor of science from aditya degree college affiliated with aknu-R with aggregate of 83.04% in 2016.

Technologies:

```
 RPA Tools              : UiPath
OS                      : Windows 7/10
Technologies            : UiPath ,sql.
Methodologies           : Jira , Confluence,
Automated Technology    : Web Automation ,Desktop Automation, Citrix, Email Automation, Excel
                          Automation, PDF Automation, Document Understanding.
```

Professional Experience:

Project #1:

Name	:	**Patient Pay Billing Requests**
Client	:	USA
Tools/Technologies :		UiPath Studio , RE- Framework, UiPath Orchestrator

Project Description:

This project includes automation of processes associated with Health group organizations. Patientpay billing requests is a process of sending billing information through secure Delivery requested based on particular order or tenure of period, so that the insurance/policy holder ensures billed/charged amount is based on the policy and validates to avoid the unbilled charges pharmacy companies and pay based on the patient responsibility.

Roles & Responsibilities:

- Analyzing the requirements through process design documents and solution understanding functionality of process.
- Worked on automation of various manual processes which includes applications like web Automation, MS Outlook and MS Excel.
- Build and development of a given business operational process automation ensuring it adheres to required development standards, framework and best practices
- Involved in testing Unit test cases for each application based on PDD and SDD in various environments.
- Worked with Queues, error managed and case management
- Testing the automated process with different test scenarios using client provided test data.
- Implemented change Requests and post production support to the client.
- Designed solutions utilizing RPA best practices and maintain technical responsibility for project delivery

Project #2:

Name   : **LiveVOX**

Client   : **Manila (Internal)**

Tools/Technologies : UiPath Studio , RE-Framework, UiPath Orchestrator.

Project Description:

LiveVox real time monitoring is the process of live data we have to extract two table based on call centers. Need to check (Lunch, break, in call, hold) whether they are exceeding the duration based on Masterfile. We have to intimate on notice to the team via MS Teams.

They are two applications named LiveVOX CHC, LiveVOX CFC two different bots will run 24*7

Roles & Responsibilities:

- Conducted feasibility check for the process.

- Involved in unit testing and integration testing of various modules.

- Created SDD documents for the process.

- Held UAT and aided in pushing the design to the production environment.

- Involved in providing production support

- Prepared runbook for production support

- Integrated MS Teams and prepared a document step for organization.

- End to end development.

Project #3:

Name : **Athena Coding**
Client : Manila (Internal)
Tools/Technologies : UiPath Studio , RE- Framework, UiPath
Orchestrator.

Project Description:

Athena Coding is a Process where the inventory will get from the Outlook and we download the Excel file attachment from outlook and need to push the data into Orchestrator queue based on filter. Now open the Athena application and enter the data through queue's and based on filter we need assign/reassign the task of the current customers.

Roles & Responsibilities:

- Automated process with UiPath tool.

- Conducted feasibility check for the process.

- Involved in providing production support.

- Prepared runbook for production support.

- End to end development
